

INTERNSHIP MINI PROJECT ASSIGNMENT – FULL STACK DEVELOPMENT

Dear Interns,

You have been assigned a beginner-level Full Stack project designed to help you understand **frontend, backend, database, and API integration**.

 **Project Title:** Internship & Job Listing Portal

 **Level:** Beginner

 **Duration:** 2 Weeks

 **Suggested Technology:**

Frontend: React.js

Backend: Node.js + Express.js

Database: MongoDB

Project Objective

Develop a basic platform where users can **view internship/job opportunities, search and filter opportunities, view details, and submit applications**.

USER FEATURES

- View opportunities
- Search opportunities
- Filter opportunities by domain
- View opportunity details
- Submit application
- Display application confirmation

ADMIN FEATURES

- Add opportunity
- Edit opportunity
- Delete opportunity
- View applications

OPPORTUNITY DETAILS

- Job/Internship Title
- Company Name
- Domain

- Location
- Experience
- Description
- Application Link

WEEK 1 – Planning, Frontend & Backend Setup

- Understand project requirements and plan the application flow
- Create UI design and project structure
- Set up React.js frontend
- Create opportunity listing and details pages
- Create search and filter UI
- Set up Node.js + Express.js backend
- Create REST APIs
- Create MongoDB database models
- Connect the application with MongoDB
- Implement basic opportunity APIs

WEEK 2 – Integration, Features & Finalization

- Connect React frontend with backend APIs
- Implement opportunity CRUD operations
- Add application submission functionality
- Implement search and filtering
- Add application confirmation
- Test the complete application
- Fix bugs and improve UI/UX
- Prepare documentation and README.md
- Deploy the project (if applicable)
- Prepare screenshots and final project presentation

BONUS FEATURES

- Admin authentication
- User authentication
- Resume upload
- Email notification

FINAL SUBMISSION

Each intern must submit:

- **GitHub Repository**
- **Complete Source Code**
- **Database Structure**
- **README.md**
- **Project Report**

- **Project Screenshots**
- **Live Demo** (if deployed)
- **Final Presentation**

Important

Before starting the implementation, take some time to **understand the project requirements, think about your approach, and plan the complete application flow.**

Learn each concept step-by-step and implement the project yourself. You may use documentation and learning resources for understanding concepts, but you should **understand the code you submit** and avoid directly copying a complete project from the internet.

Your mentor will guide and support you throughout the project.

Best of luck!
